Chapter 1

Ab—ooooo!

Imagine this. You're outside on a warm night. A full moon looms large in the sky. You hear howling. Suddenly you see a creature coming toward you. It stops to scratch itself with a hind leg. It sniffs the air. You're staring at a werewolf.

Pause right here. If you've ever seen a movie, you know this event could happen. You could come upon a werewolf during any full moon.

Prepare Yourself

Werewolves are known for ripping people apart. They have terrifying claws and fangs. You can't compete with werewolves in a fight. But you can learn how to outsmart them.

Chapter 2

Know Your

Enemy

To outsmart werewolves, you have to understand them. Stories tell us that werewolves are humans who turn into wolves. Often, a full moon causes the change. The person can't control it. Being a werewolf is a terrible **curse**. For one thing, it's hard to brush all that hair.

Let's get science-y for a minute. A full moon happens every 29.5 days. The moon looks full when Earth is **aligned** between the sun and moon.
