Introduction to **ORGANS**

The heart pounds. The lungs take in air. The stomach **digests** food. The body's organs do their jobs all day. And their work keeps a person alive.

The human body has many different organs. But what are organs? They are groups of millions of **cells**. And those cells all do specific jobs. ▶

SOME MAJOR ORGANS

brain

eye

lung

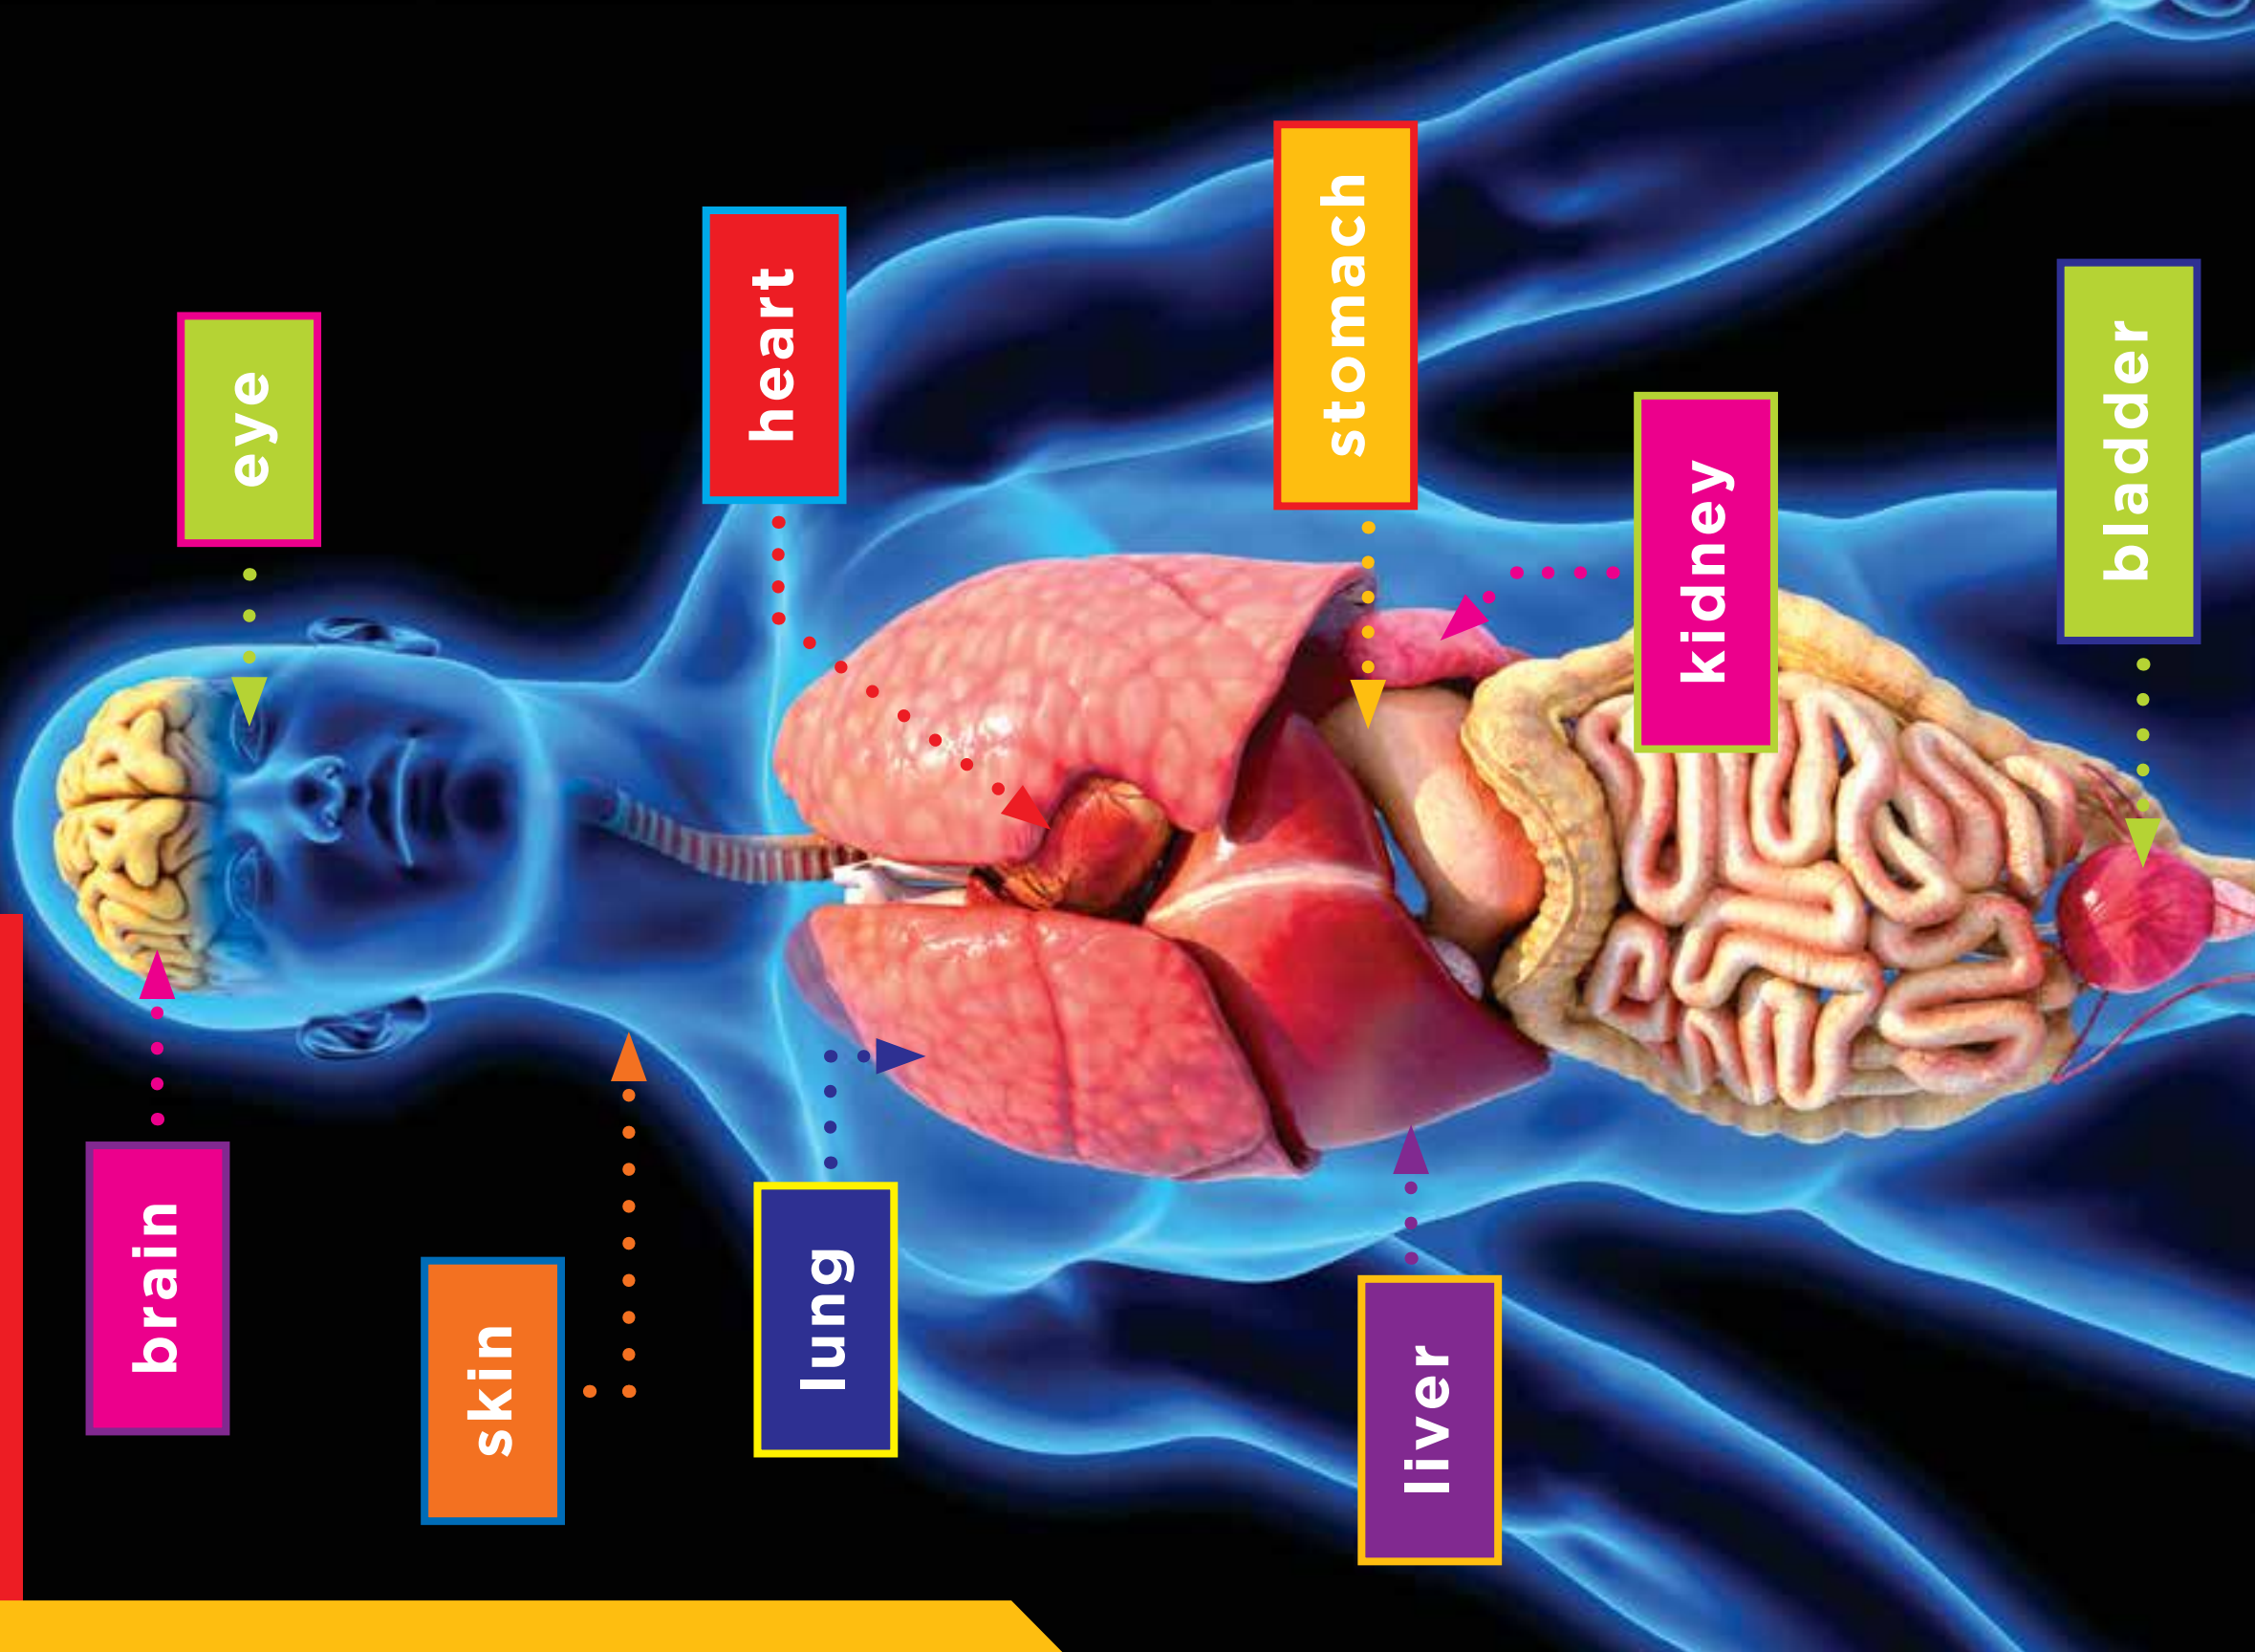

heart

stomach

liver

kidney

bladder

The **BRAIN** and the Heart

The brain and the heart are two well-known organs. Without these two, other organs couldn't do their jobs.

The brain is the control center of the body. It sends **electrical** signals to body parts. Those signals tell the lungs to breathe. They tell the heart to beat. People don't have to tell these organs to work. The brain does that automatically.
